DAS GEBET DAS APOSTOLISCHE GLAUBENSBEKENNTNIS ABTH. 1 (3)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 122 pages. Original publisher: Washington, DC: U. S. Nuclear Regulatory Commission, Office of Nuclear Regulatory Research, Division of Fuel, Engineering, and Radiological Research, 2007. OCLC Number: (OCoLC)245537947 Subject: Nuclear reactors -- Materials -- Fatigue. Excerpt: . . . Executive Summary Section III, Subsection NB, of the ASME Boiler and Pressure Vessel Code contains rules for the design of Class 1 components of nuclear power plants. Figures I - 9. 1 through I - 9. 6 of Appendix I to Section III specify the Code design fatigue curves for applicable structural materials. However, Section III, Subsection NB - 3121 of the Code states that the effects of the coolant environment on fatigue resistance of a material were not intended to be addressed in these design curves. Therefore, the effects of environment on the fatigue resistance of materials used in operating pressurized water reactor (PWR) and boiling water reactor (BWR) plants, whose primary - coolant pressure boundary components were designed in accordance with the Code, are uncertain. The current Section - III design fatigue curves of the ASME Code were based primarily on strain - controlled fatigue tests of small polished specimens at room temperature in air. Best - fit curves to the experimental test data were first adjusted to account for the effects of mean stress and then lowered by a factor of 2 on stress and 20 on cycles (whichever was more conservative) to obtain the design fatigue curves. These factors are not safety margins but rather adjustment factors that must be applied to experimental data to obtain estimates of the lives of components. Recent fatigue - strain - vs. - life (- N) data obtained in the U. S....
